## Wireless module settings

### Introduction

Wireless barcode scanner transfers the data to computer via receiver.

If scanner & receiver need to re-pair, scan the "Pairing Function".

### LED Description

#### Indicator Description

Indicator Type	Details Description
Battery 	Four bars, charging flash
Wireless status 	Bluetooth/2.4G connection
Pairing 	Bluetooth/2.4G quick flash
Scanner ring light 	One flash for one successful scanning Slow flash for pairing mode
Base ring light 	One flash for one successful data transferring Slow flash for pairing mode

### Buzzer Description

Voice Type	Details Description
One medium long high voice	Successful pairing
One long and three short voice	Back from sleep
One short and long voice (Prompt, Successful)	Successfully reading code
Three continuous short voice	Alarm prompt

## **CCD module Default Settings**

Scanning the below barcode can restore the CCD module scanner the default.

Restore default CCD module

## **Wireless module Default Setting**

Default setting for wireless module

Scanning the below barcode can restore the wireless module scanner the default.

## **Firmware Version CCD module.**

Firmware CCD module version

## **Firmware Version wireless module**

Firmware wireless module version

## **Battery Display**

Display battery capacity

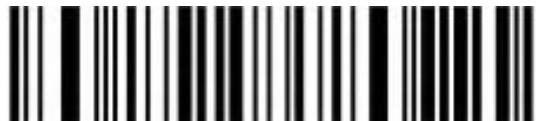

Note: Percentage display

## USB cable Output Mode

USB priority output (Default)

If a USB cable is connected to the reader, data will only be sent via this port.

Output simultaneously USB and wireless

## Data Transfer Mode

Immediate (Default)

Automatic Storage

Note: Automatic storage mode. Data is automatically saved in scanner when exceed communication distance, scan the "Upload all data" code to complete the data transfer.

Memory

Note: Memory mode, the scanned barcode will be automatically saved in scanner. If the data need to be viewed or uploaded, then scan the “Upload all data” code to complete the data transfer.

## Memory mode

Upload all data

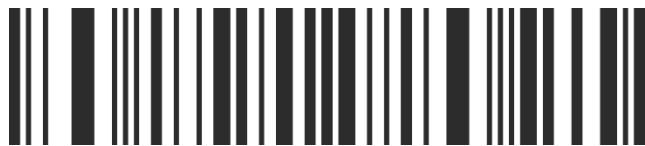

Clear all data

Note: Clear all data can be effective under Memory mode & Automatic Storage mode.

Display stored data

## USB Interface Type

USB-HID (Default)

USB-COM

(For old OS Driver is needed for USB Virtual Com Port)

## Wireless Setting

2.4 Ghz (Default)

Bluetooth HID Mode

Bluetooth SPP Mode

Note: Scan the Bluetooth code change to Bluetooth mode. When the scanner is restored, for Bluetooth mode scan the code again.

In Bluetooth SPP Mode recommended set Never Sleep.

## Bluetooth HID transmission rate

Fast

Medium (Default)

Low

## IOS show/hide the Keyboard

(Under Bluetooth mode)

Show or Hide

## Pairing Function

2.4G Receiver Pairing

Note: Scan this code, scanner will enter the automatic pairing mode for 1 minute, then re-insert the receiver. There will be a sound heard when pairing successfully.

For Bluetooth pairing setting, search by Bluetooth device.

Bluetooth HID Pairing

Scan the “Bluetooth HID Pairing” barcode, the scanner is ready to be connected by other bluetooth devices.

## Sleeping Settings

Different Sleeping time choices:

Never Sleep

10s

30s

1min

2min

5min (Default)

10min

30min

Immediate sleep – Sleep Now

## Keyboard Language Settings

USA (Default)

Germany

France

Italy

Canada

Spain

Brazil

Sweden

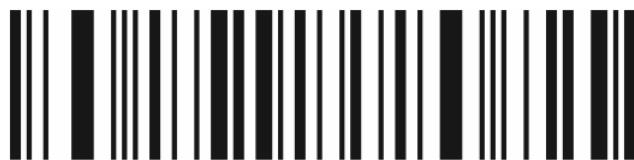

Portugal

Belgium

Turkey-F

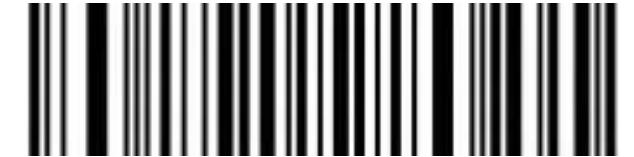

Turkey-Q

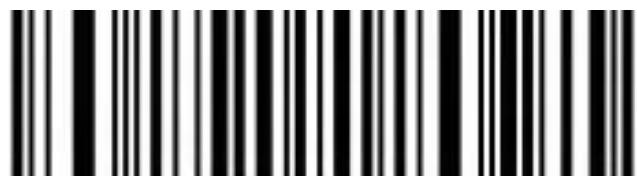

Poland

Finland

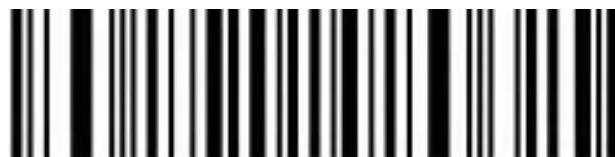

Latin America

Serbia

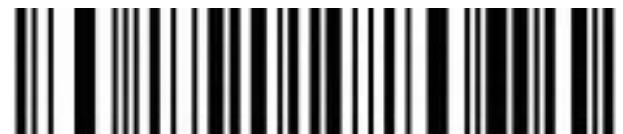

Hungary

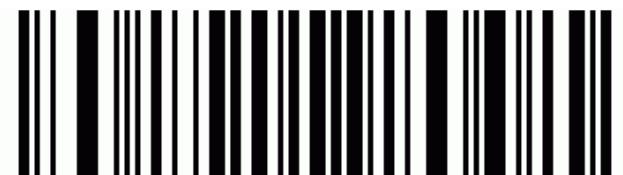

Denmark

Norway

Japan

Czech

## USB-HID Data type

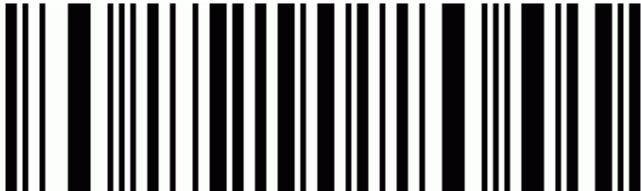

Keyboard function key (Default)

ALT Mode ON -Universal language

ALT Mode must be set for send low ASCII chars like ETX, STX, LF ...

## UTF-8 chars Keyboard Conversion

UTF-8 keyboards conversion

This feature works only in ALT mode.

## GS (group separator) Control

### Control Character Output for GS Control

This setting is for CCD module only, not for wireless module.

Disable (Default)

Enable

### GS (group separator) character conversion

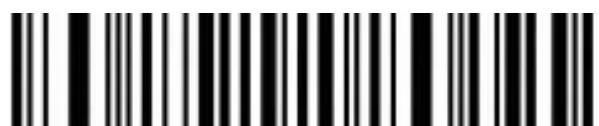

None (Default)

In ALT mode transfer GS like CTRL+] (terminal emulation keys).

GS convert to <GS>

GS convert to |

GS convert to ]

GS convert to ^]

## Letter case conversion

Normal Letter Case (Default)

All Uppercase

All Lowercase

Case Inversion

## Data Edit

Data sending in this format [Prefix][CodeID][Data][Suffix][Terminator]

### **Terminator character**

None

Enter (Default)

Tab

## Add Prefix and Suffix Settings

You can add characters to the front and back of the read data.

The syntax for adding is:

1. Read settings code Add Prefix or Add Suffix

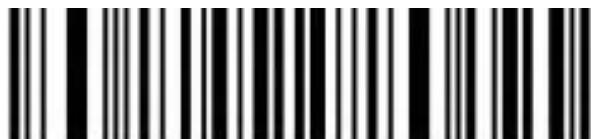

Add Prefix Setting

Add Suffix Setting

2. Choose the location from which you want the characters will be added. If you want to add from the first or last position, select 0 1. Perform by reading the appropriate codes corresponding to the numbers in the Appendix - Data Code Table. It is necessary to always read two numbers! The difference between a Prefix and a Suffix is in which side you count the characters from. Prefix - front / Suffix - back.
3. In the Appendix, find the appropriate codes (Tables ASCII Code Table, Function and special keys, Ctrl, Alt, GUI keys) for the characters or keystrokes you want to add. And you will gradually read them with a reader.
4. At the end save your settings, reading the code and Saved Finished Set.

## Finished Set for Data Edit

Saved and Finished Set

If you want to clear the settings, follow steps 1 and 4 only.

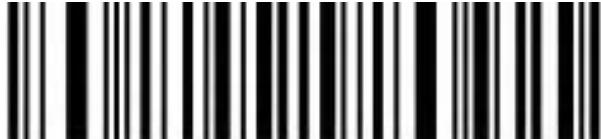

Note: For a better explanation, look at the examples in the Appendix.

## **Hidden Character Settings**

You can cut-hide characters in retrieved data. You can cut from the front or back.

The syntax for hide is:

1. Read settings code Hide front or Hide back character

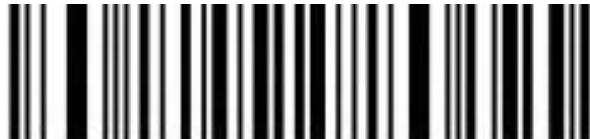

Hide front character

Hide back character

2. Select the location from which you want to hide the characters. If you want to hide from the first or last position, select 0 1. Perform by reading the appropriate codes corresponding to the numbers in the Appendix - Data Code Table. It is necessary to always read two numbers!  
The difference between a Hide front and a Hide back is in which side you count the characters from.
3. Now select how many characters you want to hide. Again, select two numbers from the table in the appendix, similar to point 2.
4. At the end save your settings, reading the code and Saved Finished Set.

## **Finished Set for Data Edit**

Saved and Finished Set

If you want to clear the settings, follow steps 1 and 4 only.

Note: For a better explanation, look at the examples in the Appendix.

## **Scan Mode**

### **Auto Sense Mode off**

Decoding by pulling the trigger of the scanner when auto sense mode is off. It's default mode.

Off (Default)

### **Auto Sense Mode on**

The scanner can sense barcode for decoding automatically.

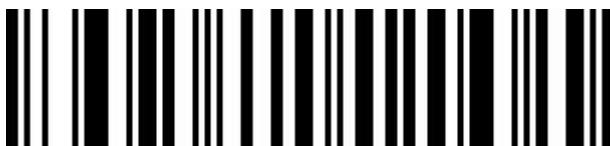

On

### **Repeat Barcode Detection**

Use for decode same barcode of interval time, it will decode only one time if not exceeded set time.

500ms

750ms (Default)

1s

2s

## Buzzer Configuration

### Base Voice Setting

Enable Base Voice (default)

Disable Base Voice

### Prompt Tone Volume Setting

Off

High (Default)

Medium

Low

### Prompt Tone Setting

Sound frequency 2048Hz

Sound frequency 2700Hz

## Successfully Decode Prompt Tone Setting

Off

On (Default)

## Successfully Decode Prompt Audio Frequency Setting (Tone)

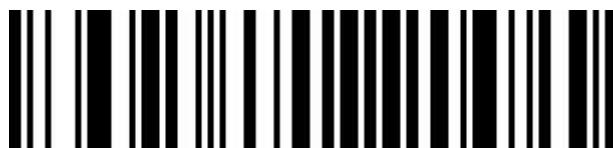

1 (Default)

2

3

Custom

## Successfully Decode Prompt Duration Setting

Long (Default)

Short

## Error Warning Prompt Frequency Setting (Tone)

There will be four consecutive error warning tones if data transmission fails, and a single error warning tone when the unrecognized configuration code is scanned.

Low (Default)

Middle

High

## **Code ID**

Please check Code ID from barcode type ID Table

Off (Default)

Before Switch on

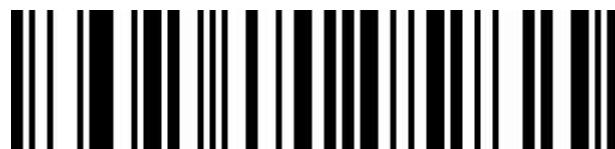

After Switch On

## **AIM ID**

Please check AIM ID from AIM ID Table

Off (Default)

Before Switch On

After Switch On

## **Inverse color barcode selection**

( Only 1D/DataMatrix/Aztec )

Normal Color

Inverse Color

Both (Normal/Inverse)

## Barcode Type Selection

### Enable/Disable All barcodes

Enable all barcodes will low down decoding speed. So, we suggest you switch on scanner when needed.

(Default is switch on state)

Enable All

Disable All

### Enable/Disable All 1D barcodes

Enable All

Disable All

### Enable/Disable All 2D barcodes

Enable All

Disable All

## Codabar

Enable

Disable

## Codabar Start/Terminal Character

Not Send Codabar Start/Terminal Character (Default)

Send Codabar Start/Terminal Character

## Set Length Range For Codabar

Minimum Length (0~50bit)

Maximum Length (0~50bit)

## Code 39

27	1B	ESC
28	1C	FS
29	1D	GS
30	1E	RS
31	1F	US

## **Example for user-defined prefix and suffix:**

### **Example 1.1:**

Set "XYZ" to the second position in the codes.

For example data in code is: 1234567890 - And it should look like this: 1XYZ234567890

1. Read code from Add Prefix

Add Prefix Setting

2. Add to the second position, select two number from Appendix - Data Code Table - reading the appropriate codes corresponding to the numbers -> **0** and **2**.

0

2

3. In the Appendix, find the appropriate codes for chars X Y Z (Tables ASCII Code Table) to add. And you will gradually read them with a reader. **X** and **Y** and **Z**.

~&458&~

X

~&459&~

Y

~&45A&~

Z

4. Save this settings reading code **Saved and Finished Set**.

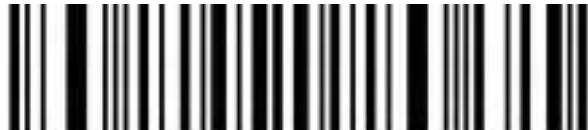

Saved and Finished Set

### **Example 1.2:**

Set two **Arrow Down** as last keystroke (remember that the last character is a terminator-CR).

1. Read code from Add Prefix

Add Suffix Setting

- Add to the last position, select two number from Appendix - Data Code Table - reading the appropriate codes corresponding to the numbers-> **0** and **1**.

**0**

**1**

- In the Appendix, find the appropriate codes for Arrows Down (Function and special keys Tables) to add. And you will gradually read them with a reader. **Arrows down** .

**DownArrow**

**DownArrow**

- Save this settings reading code **Saved and Finished Set**.

**Saved and Finished Set**

### **Example for Hidden Character Settings**

Hide two chars from second position.

For example data in code is: **1234567890** - And it should look like this: **14567890**

- Read settings code **Hide front character**

**Hide front character**

- Select second position select two number from Appendix - Data Code Table - reading the appropriate codes corresponding to the numbers -> **0** and **2**.

**0**

**2**

- Now select how many characters you want to hide. Again, select two numbers from the table in the appendix, similar to point 2. -> **0** and **2**.

**0**

**2**

- Save this settings reading code **Saved and Finished Set**.

**Saved and Finished Set**

## **Example for barcode length range configuration**

Please sure it not bigger than current maximum length range when set up minimum length. Otherwise, it will show error. In the same way, must be make sure it's not smaller than current minimum length range when set up maximum length. Please for numbers and Save settings code only for Appendix ***Table of numbers for barcode length range configuration!!!***

### **Example 2.1:**

Set Code 128 length range is 4-12bit

Step: Set "Code 128 Minimum (0~50bit)"; Set "4"; Set "Save"

Set "Code 128 Maximum (0+50bit)"; Set "1" "2"; Set "Save"

### **Example 2.2:**

Set Interleaved 2 of 5 length is 14bit

It can set up by "ITF25 14bit", through barcode length range of Maximum /Minimum to set,too.

Step: Set "Interleave 2 of 5 Minimum (0~50bit)"; Set "1" "4"; Set "Save" Set "Interleave 2 of 5 Maximum (0+50bit)"; Set "1" "4"; Set "Save"

### **Example 2.3:**

Set Code 39 length is random length

Step: Set "Code 39 Minimum (0~50bit)"; Set "0"; Set "Save"

Set "Code 39 Maximum (0+50bit)"; Set "0"; Set "Save"

## **Read Skills**

To get a good reading performance, a beam of aim light from scanner should be aimed at the centre of barcode, support to aim in any directions for read convenient, too.

More nearly barcode, the beam of aim light is smaller; More further barcode, the beam of aim light bigger. For reading barcode correctly, if barcode small, the scanner should be close to barcode, if barcode big, the scanner should be farther to barcode.

If the barcode is highly reflective (for example: coated surface), please adjust the scanner angle to read it successfully.

## **Safety**

Please not direct aim eye when the scanner has a strong ray of light, to avoid causing any hurt or unwell.
